

Job Title: Automation QA Engineer
Location: Wallingford
Business Area: Tech
Salary: Competitive

About GTI

We aim to help students realise their potential in the world of work through technology, content and tools. That's not an easy thing.

We believe in understanding students and partnering with employers, universities, schools and other technology providers.

It's about students finding the right role and employers finding the most suitable candidates. But its more than that – it's about helping young people discover options, develop and build confidence.

The Role Aim:

We are looking for passionate QA Analysts with a range of experience and skills, who will help us deliver our cutting-edge SaaS solutions by working on recruitment websites for FTSE 100 companies as well as careers service websites for UK universities. For this role you will be working on setting up a new automated pipeline with the team and then automation at least 50% of the time.

The Role Outcomes:

- *A well-maintained automation framework that runs all smoke and regression tests for our core systems*
- *New automated tests continually added as new features are added to the core systems*
- *Documentation for the automation framework and processes*
- *A flexible QA team that can apply themselves to all QA tasks*

Main Duties and Responsibilities:

- *Working with the team to establish a new automated pipeline using best of breed tools such as Selenium*
- *Creating automated testing scrips to cover our regression tests*
- *Staying up to date with the latest software testing strategies and tools.*
- *Working within an enjoyable dynamic team.*
- *Creating well-structured test plans and test cases*
- *Experience in both Agile and Waterfall*
- *Using a curious and methodical mind set to investigate issues.*
- *Working closely with cross-functional teams to ensure quality throughout the SDLC*

Technologies you'll be using:

- *TestRail*
- *Jira*
- *Browserstack*
- *Snagit*
- *Automated testing tools*
- *Jenkins*
- *Confluence*
- *Selenium*
- *Cucumber/Gherkin*

Person Specification:**Work Experience, Knowledge & Skills:**

- *A UK BSc in Computer Science or related subject*
- *Experience with automated testing tools*
- *Excellent communication skills in English*
- *Proven experience as a Quality Assurance Tester or similar role*
- *Experience working in an Agile development process*
- *Experience working with software development teams*
- *Knowledge of software QA methodologies, tools and processes*
- *Experience with testing accessibility*

Competencies required for the Role:

- Growth and output mindset
- Excellent communication skills
- Critical attention to detail and high level of accuracy
- Proactive, adaptable and a quick learner
- Focused, conscientious, efficient with excellent time management skills
- Team player
- Trustworthy
- Excellent attention to detail
- Professional at all times

Other Information

- Permanent role – 37.5 hours per week between Monday to Friday 9.00 – 5.30pm
- 3-month probationary period
- Benefits package: 5% Contributory Pension, initial 25 day's holiday, enhanced maternity/paternity policies, life assurance scheme

Please send your CV and covering letter to recruitment@groupgti.com
